I. Objectives

- In this section, the goals in this laboratory are:
- To illustrate the process of determining the requirements for a system
 - To enumerate both the requirement definition and requirement specification

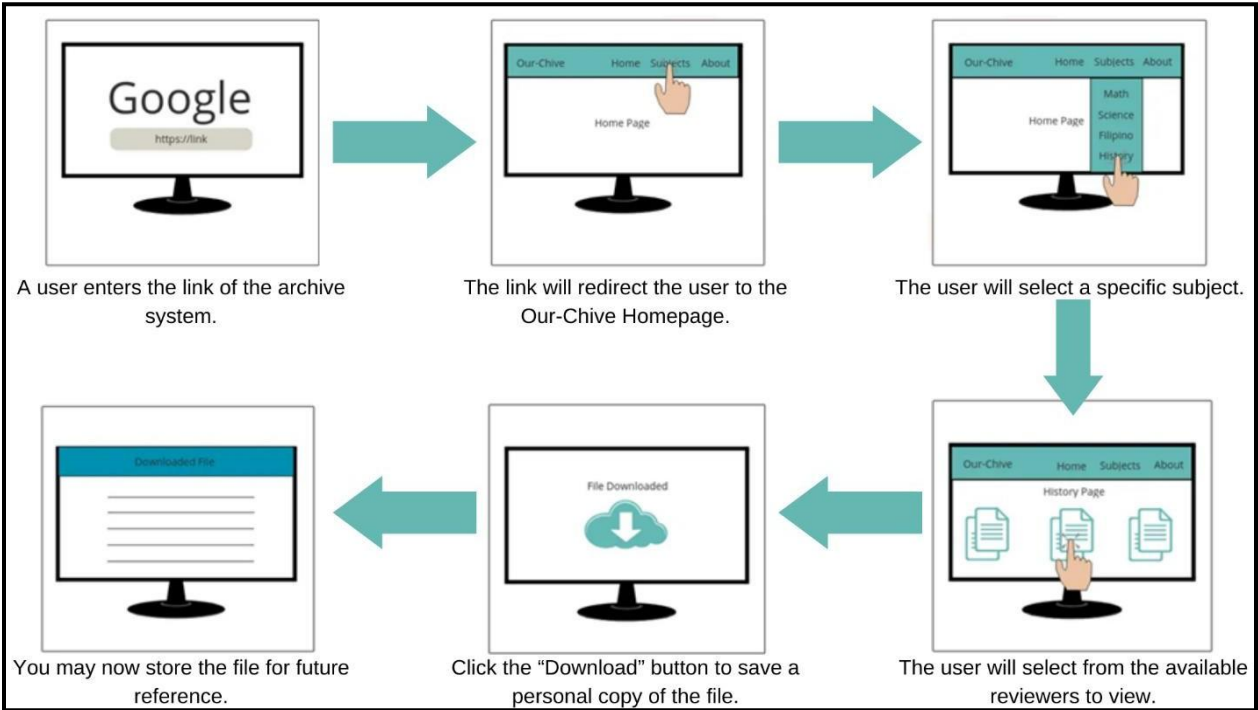

II. Methods

Instruction: Create a storyboard of your software or system.

Manual System

Automated System:

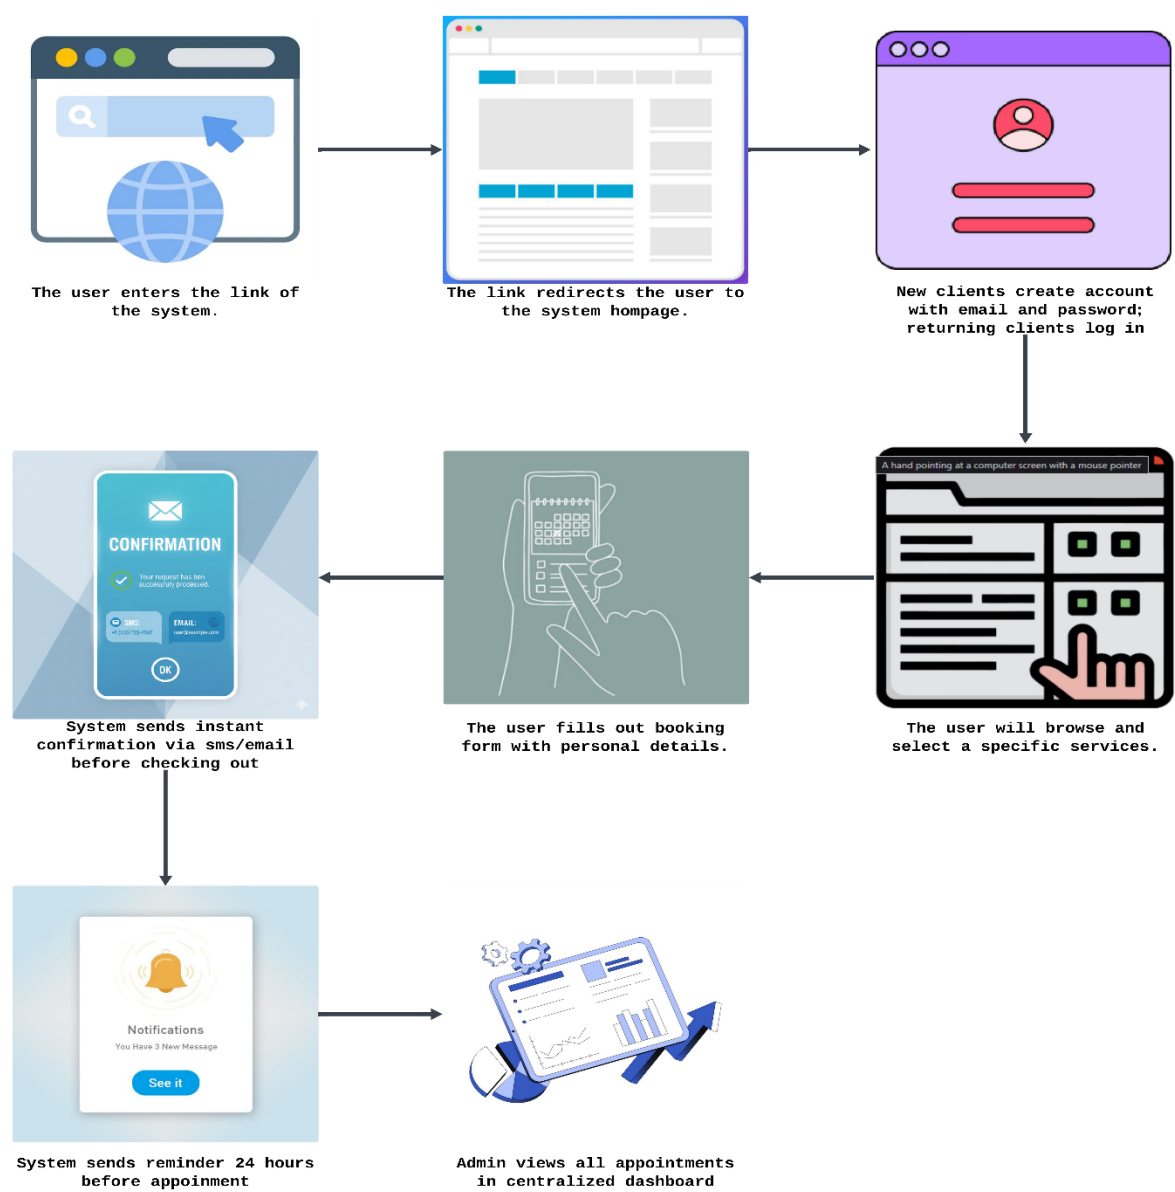

III. Results

Manual System:

Automated System:

IV. Conclusion

In this lab, our group successfully showed the process of finding out exactly what a system needs to work. We were able to list both the requirement definitions and the requirement specifications for our project. By creating storyboards for both the manual and automated versions of the system, we learned how to plan a better way for students to find, use, and save their study materials.
